DDI-1326-75

15 May 1975

MEMORANDUM FOR: Deputy Director for Intelligence

SUBJECT : Contractor Access to Selected CIA CONTROLLED
DISSEM Publications

STAT 1. [] asked that I prepare a draft response from you to Gen. Faurer replying to his request that [] be allowed access to those parts of OCI's output that are presently unavailable to an experimental program, AITE, because of CONTROLLED DISSEM and WARNING NOTICE markings. My attached draft says "No." 25X1

2. AITE, Advanced Indication Technology Experiment, is a pretty fair idea. [] 25X1

3. These calculations and displays can be run against "events" such as the October War or Brezhnev's "illness." The OCI publications are desired for these "events" records; what was going on in a political or diplomatic sense [] 25X1

4. [] 25X1

5. Three DIA employees with a fourth soon to start are being trained on how to push the buttons. I surmise they are a very long way from understanding what is actually going on.

DIA review(s) completed.

SECRET

SUBJECT: Contractor Access to Selected CIA CONTROLLED DISSEM Publications

25X1 6. A fair number of CIA people have been briefed on AITE. In addition to those in the 2 May memorandum to you, [] DIA have briefed [] The controls on OCI products have been discussed with these two in particular and you may wish to talk to [] before you do anything. [] whose business is this kind of thing on a daily basis, is adamantly against the release. 25X1

25X1 8. OCI, of course, does not originate either the CONTROLLED DISSEM or WARNING NOTICE markings. They result primarily from State, DDO, and NSA imposed caveats. By regulation, you may not lift the dissemination restrictions and must return to the originator on an item-by-item basis for relief when you desire it. I think that the DCI may lift them but I'm not aware that he's done so on any regular basis. Ergo, the following draft response. Dick Lehman concurs in this memorandum and in the draft for Faurer.
